

The Channel Panel™

Increase the flow capacity
of your screen and
achieve greater
screenings removal.

Benefits

Tighter Screening
Substantially Less Headloss
Passes Higher Flows
Extends Screen Life
More Thorough Cleaning

3-Dimensional Screening

Bar screening and
orifice screening in
one panel design.

The Channel Panel™

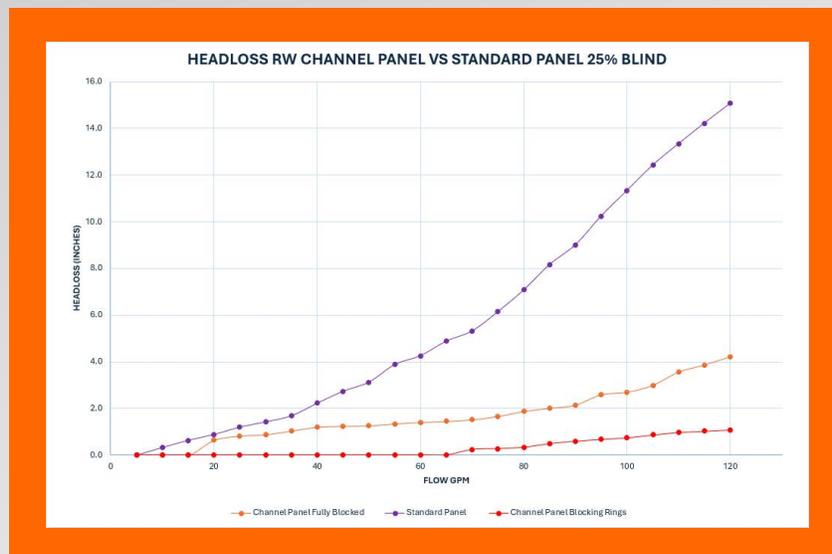

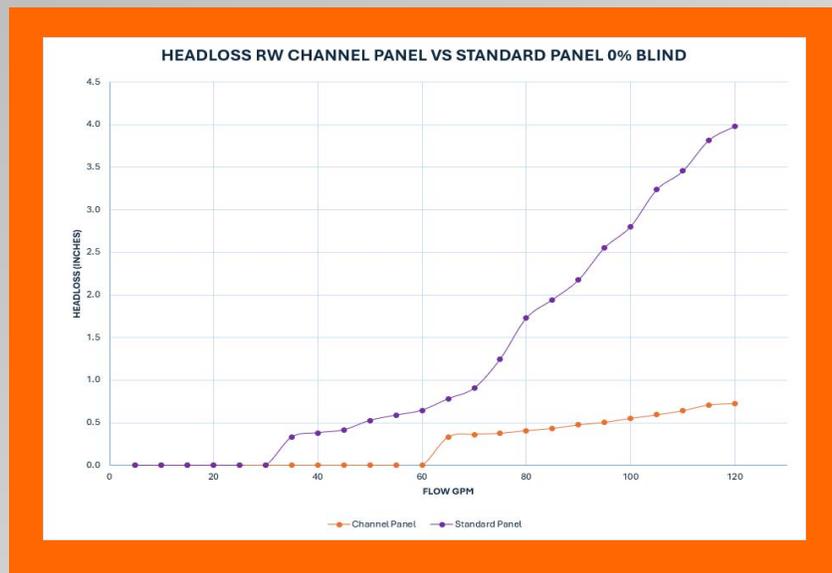

Our design is nothing short of revolutionary. Instead of flat panel, perforated plate screening which blinds with debris, our patent pending elevated bars provide first-stage coarse screening. This allows debris to be suspended above our proprietary orifices and allows water to pass under the debris. This reduces velocities, and increases capture of debris and screen capacity.
